

Universal accessibility is fundamental to our goal of providing people with disabilities the means to meet their daily needs and ensure their quality of life.

In order to achieve this goal, we promote compliance with laws requiring the removal of physical and communication barriers, encourage the development of universal design projects, and publicly recognise those projects that successfully achieve integration.

We conceptualise spaces for all members of society, regardless of age or capabilities, promoting the development of spaces and services that meet the needs of all people.

Considering the importance of transportation, we offer consultation services to facilitate mobility and the safe and comfortable use of various transportation options.
